

# Cap and Closure Molds

## Collapsing Core Technology

Our innovative five-piece collapsing core design enables the molding of a continuous, 360 degree undercut in the plastic part design. This technology can also be used for continuous, internal threads on closures, containers with neck diameters smaller than the body, and a host of other creative packaging solutions.

- 360 degree undercuts possible.
- Substantial part weight savings.
- The potential for mold wear is eliminated.
- Robust design does not rely on frictional force to collapse.
- Available in stack mold configuration.
