

Cap and Closure Mold Technology

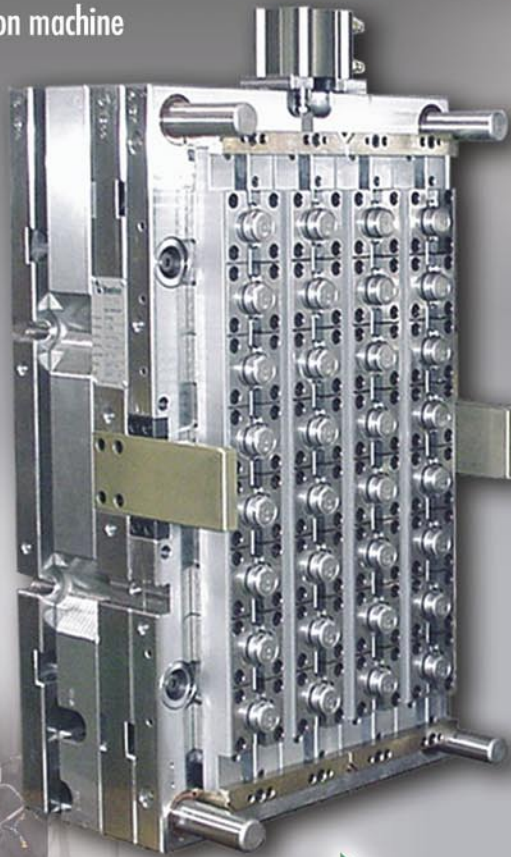

Compact Slide Action Mold (CSAM)

High cavitation is the order of the day when it comes to the production of closures. Our new, advanced Compact Slide Action Mold (CSAM) design can substantially increase the number of cavities that can be fit on the platen of your machine by reducing the pitch between rows of cavities on the mold face. The new design eliminates the need for horn pins, opening cams and slide retainers. As well, the slide actuation is independent of the mold opening providing for cycle saving opportunities.

Features:

- Highest cavitation possible for tamper evident applications
- A 2 x 128 mold can fit in a 400 ton machine
- No need for secondary slitting operation for T/E band
- Cleaner operation due to elimination of horn pins
